

3.2 Price calculate

- Design a GUI application that obtain the price and quantity of an item, calculate the sale-value, discount and net payable amount. Discount as calculate as 10% of the sale value.

- Now double click on boundary the push **jButton1** (Calculate Button). The code editor window will appears. In it, simply type of following code.

```
1.    double price = Double.parseDouble(txtprice.getText());
2.    double qty = Double.parseDouble(txtqty.getText());
3.    double salamount = price * qty;
4.    double discount = salamount * 0.10;
5.    double netamount = salamount - discount;
6.    txtamount.setText(""+salamount);
7.    txtdisc.setText(""+discount);
8.    txtnetamount.setText(""+netamount);
```
