

### 3.4 Student Age

- Design a GUI application as shown in following screenshot. The application should obtain age of a student and then display the age of student in 2016 in a label.

- Now double click on boundary the push **Button1** (Submit Button). The code editor window will appears. In it, simply type the following code.

```
1.      int age = Integer.parseInt(txtage.getText());
2.      int runningage = age - 1;
3.      lblage.setText("You Will Be " + runningage + " in year 2016");
```
